

Glen introduces Italian Burners Built in Hobs for faster cooking

Glen is proud to introduce the built-in hobs with the SABAF Double Ring Burners in many configurations. These have been specially designed and developed in ITALY to meet the demands of Indian Kitchen.

The all new Glen Built in hobs have one triple ring burner for much faster cooking and the rest are double ring burners for regular cooking with much better results. The Indian cooking requires more heat and thus more flame, considering the fondness of every Indian towards foods which require deep frying or longer time to cook. Indian homemakers are used to a double ring flame in burners for quicker and efficient cooking. Hence despite the elegant design these European sealed burners of built in hobs, these are considered less favorable because they are slow and consume more time for cooking. These efficacious double ring burner produces double ring of flames in each burner, thus one can enjoy faster and proper cooking because of high flame. The Triple ring burner is also provided when more heat is required in a short time like for deep frying. The ergonomic metal knobs are sturdy and strong and give a firm grip to your handling. These knobs are made of alloy and give the hob a professional finish. The cast iron pan supports can accommodate heavy vessels with a firm balance. Unlike other pan supports these do not corrode or fade easily. The Glass used is 8.0mm Toughened for extra safety.

Glen India is constantly endeavoring to bring the latest innovations in India for improved functionality of Indian Kitchens and with this advanced introduction they have added one another milestone to their journey.
